

Confiderm® LDC

Low Dermatitis Nitrile Exam Gloves

McKesson Confiderm® LDC low dermatitis nitrile exam gloves with fentanyl protection offer all the benefits of a nitrile glove without the sulfur-based chemical accelerators. This feature promotes allergy care and provides better protection to glove users with Type I hypersensitivity (natural rubber latex protein) and reduces the potential of Type IV hypersensitivity (chemical). Ideal for people susceptible to hand dermatitis or sensitive to chemical accelerators commonly used in the manufacture of nitrile gloves.

Features and Benefits

- Low dermatitis potential; ideal for individuals with skin sensitivities to regular nitrile gloves
- Tested to resist permeation of 15 chemotherapy drugs, and fentanyl
- Lightly-textured fingertips
- Thin with high tactile sensitivity
- Chlorinated internal surface
- Powder-free and non-sterile
- Not made with natural rubber latex
